

Date of Survey	Grid Reference	Elevation	Internal Diameter	External Diameter	Entrance	Condition and size of walls	Photos	Other Notes
								I haven't as yet found this Hut 'A'. Without a better grid reference it's lost in deep heather!
21.5.13	NH 45453 45379	199	Oval, longest axis NNW , so 10.1m x 7.6m	Oval, so 12.7m x 10.9m	Possible entrance in SE	Walls are only partially identifiable, best preserved in SW quadrant. There they are spread to 2.3m, standing 0.2 m high.	DSc01280 – from SSW. Pole in centre of roundhouse. DSC01281 – from E. Note steep slope. Plan RSJ00B 13.5.13	In May 2013 this Hut 'B' is deeply embedded in heather, only just visible. Note that it is oval, that its axis is across the west-facing slope, and slightly built out from it. It abuts Hut 'C' on its southern edge.
21.5.13	NH 45459 45367	197	Oval, longest axis N , so 10.8m x 8.1m	Oval, so 14.2m x 12.5m	Probable entrance in S	Walls are only partially identifiable, best preserved in E (upslope) side. Here they are spread to 2.5m, standing 0.2 m high.	DSC01275 - from E. Note extensive heather cover. DSC01277 - from SW. Ranging pole in centre of roundhouse. DSC01278 - from SW. Pole across probably entrance. Plan RSJ00C 13.5.13	In May 2013 this Hut 'C' is deeply embedded in heather, only just visible. Note that it is oval, that its N-S axis is across the west-facing slope, on a platform that is both dug into the slope in the E, and built out from it in the W. It abuts Hut 'B' on its northern edge.
28.3.13	NH 45507 45451	210	Circular 7.50m x 6.7m	Circular, so 10.6m x 10.2m	Possible entrance in SSE, dimensions uncertain	Walls are indistinct in SW, but best seen in E. See plan. Here they are 1.5m spread, 0.5m high.	DSC0017 - from N, and above. Note blue flags outline ext circle, yellow flags outline int circle. DSC0018 - from S. Note blue and yellow flags DSC0020 - from S. The attached enclosure on the W of the hut circle DSC0021 - from N. The attached enclosure on the W of the hut circle DSC0022 - possible SSE entrance Plan RSJ00D 28.3.13	On a gentle west facing slope, at the base of a mound to the north lies this large hut circle, with an ellipse of stone wall to the west, ie down-slope. In the original 1970 survey this is described as a souterrain, confirmed by a further OS visit in 1981. What remains of this structure is an ellipse of stones, approx 3.5-4m outwith the western side of the original hut circle. They now don't look like a souterrain, although their function is now unclear. There is a path, probably animal track, that runs through the northern part of the circle, exposing the base.

28.3.13	NH 45601 45501	221	Circular 4.7m x 4.1m	Circular, so 7.5m x 7.5m	Entrance not identifiable	Remaining walls are best seen to W, there being 1.4m thick, and standing to 0.3m high	DSC0012 - from NW. DSC0014 - from S. Showing area of possible entrance. Blue flags on outer wall, yellow flags on inner wall. DSC0015 - from E Plan RSJ00E 28.3.13	On a gentle east facing slope, this hut circle occupies a slight knoll, with a built extension to S. Recent heather-burning (for grouse) has exposed a degenerate circle of stones that would otherwise have been missed.
28.3.13	NH 45595 45562	226	Oval, axis N-S, so 7.3m x 9.75m	Oval, so 9.98m x 11.05m	Two lines of rough large stones at south probably define a walled entrance passage way, 1.3m long, 1.5m wide, with stones standing to 0.8m high.	Circle walls are indistinct, apart from in W and SE quadrants	DSC002 - from S. General view of circle, showing entrance passage way DSC003 - from N and above DSC004 - from D. Details of entrance passage way. DSC009 - from E. With delimiting flags Plan RSJ00F 28.3.13	On a gentle south facing slope, this hut circle has a definite entrance, and entrance passageway. Recent heather-burning (for grouse) has exposed a degenerate circle of stones that would otherwise have been missed.
1.3.13	NH 45624 45556	222	Circular, so 9.0m x 9.0m	Circular, so 13.2m x 12.8m	Possible entrance in SSE,	Indistinct walls marked by periodic stones. Wall best seen in W, spread 1.8m, up to 0.5m high	DSC01030 - from N. Hut circle delimited by flags. DSC01033 - from NW. The annexe is identified by three standing poles Plan RSJ00G 1.3.13	On a gentle south facing slope, the hut circle stands on a platform slightly built out in S. There is an elliptical extension, or "annexe", on the NW arc. Recent heather-burning (for grouse) has exposed a degenerate circle of stones that would otherwise have been missed.

10.6.13	NH 45664 45540	220	Circular, so 7.5m x 7.5m	Circular, so 9.0m x 9.0m	Possible entrance in S	Very indistinct walls, very few stones left, one large boulder in SSW	DSC01339 - from NW. Shows the best remaining segment of wall DSC01340 - from S. Note heavily burnt interior DSC01342 - from SW. Note large remaining boulder near possible entrance. Plan RSJ00H 10.6.13	This hut circle is now very indistinct, being visible as a round depression in the peat, rather than being easily identifiable by its walls. Recent heather burning helps.
								I haven't as yet found this Hut 'J'. Without a better grid reference it's lost in deep heather!
								I haven't as yet found this Hut 'K'. Without a better grid reference it's lost in deep heather!
