ND. 059:557 Buaille, fort & chambered cairn, Beinn Freiceadain (5)

(ND 0593 5585) Chambered Cairn (NR)

(1)

Ben Freiceadain: Orkney-Cromarty Round Cairn with (?)
 Camster-type chamber. This cairn is situated within the
 fort HND 05 NE 018 which crowns the summit, towards its W
 end. The mound is grass-grown; the top has been reduced
 so that it now stands about 6 ft high, and the S side has
 been severely robbed. The diameter is 55 ft and the edge
 is quite distinct. The entrance has been from the ENE.
 At 7 ft from this edge of the cairn can be seen the tops of
 two slabs leaning outwards which are probably transverse
 slabs at the entrance to the passage, part of a dry-built
 N wall of which is visible further W. A lintel across the
 passage remains in situ 6 ft behind the leaning stones.
 In the centre of the cairn and 12 ft W of the lintel,
 three slabs, evidently forming part of the chamber, pro-
 trude through the turf, their tops being about 2 ft

6ft = 1.83m
55ft = 16.88m

7ft = 2.13m

12ft = 3.67m

2ft = 0.61m

higher than the lintel stone. Two of these slabs are set
 transversely to the axis of the passage, 3 ft apart, the
 third being set across the inner end of the S stone.

3ft = 0.91m

(2), (3)

The remains of this chambered cairn are as described. The
 remains consist of a mutilated mound of earth and stone,
 16 m N-S by 17 m transversely, with a maximum height of
 1.3 m. (See illustration).

(OSFI:WDJ:13.4.1962)

A chambered cairn, as described by Miss Henshall. There is
 a modern cairn erected on the cairn.
 Published survey (1:10,000) correct.

Description. Ben Freiceadain rises to a height of 781 ft. OD from the surround-
 ing flat moorland. Together with the slightly higher twin summit of Ben
 Dorrery it is the highest hill in the N of Caithness and a notable landmark.
 The cairn is situated within the fort which crowns the summit, towards its
 N end. The mound is grass-grown, the top has been reduced so that it now
 stands about 6 ft. high, and the S side has been severely robbed. The diameter
 is 55 ft. and the edge is quite distinct.

The entrance has been from the ENE. At 7 ft. from this edge of the cairn
 there can be seen the tops of two slabs leaning outwards which are probably
 transverse slabs at the entrance to the passage, part of the dry-built N wall
 of which is visible further W. A lintel across the passage remains *in situ* 6 ft.
 behind the leaning stones. In the centre of the cairn and 12 ft. W of the lintel
 three slabs, evidently forming part of the chamber, protrude through the
 turf, their tops being about 2 ft. higher than the lintel stone. Two of these
 slabs are set transversely to the axis of the passage 3 ft. apart, the third being
 set across the inner end of the S stone.

With fieldglasses it is possible to see at least seventeen chambered cairns
 from this site.

Ben Freiceadain

(2)

411. Chambered cairn. 'Ben Freiceadain'. Dimensions: 18m x 17m. Height: 2.50m. Subcircular mound with a central depression 8m x 7m, with a slab lying on its W side. One upright stone visible in the centre of the depression. Orientation: NW-SE. Elevation: 725' OD. ND 059558.
