52 TEXT
---------

"At NH 5576 6105 on the summit of Cnoc na Laitch in a felled plantation, are the scant remains of what may have been a cairn. All that survives is a vague circular bank measuring 26.5m overall with one earthfast boulder (upright and 0.7m high) embedded in the stony SE arc. The interior is uneven and four or five small boulders protrude through the turf. It is possible that it is the remains of a tree ring." (OSFI:AA:12.9.1973) "The enclosure is generally as described above. Roughly central within the enclosure is a turf-covered stony mound about 3.1m in diameter and 0.4m high. The presence of the mound illustrates the possibility that the feature is an enclosed cremation cemetery." (OSFI:JB:29.11.1976)

"What may be two cairns are situated 600m NW of Mountrich. One stands at the centre, the other on the NE, of a tree-ring. They measure 3.1m and 7.7m in diameter respectively." (1)
